Supplemental figure legend and tables

Supplemental Figure 1. The absence of other PDI family members does not affect spermatogenesis. (A) H&E-stained testicular and epididymal sections of control, and *Pdia4*^{-/-}, *Pdia5*^{-/-}, *Pdia9*^{-/-}, *Pdia11*^{-/-}, *Pdia13*^{-/-}, *Pdia14*^{-/-}, *Pdia15*^{-/-}, *CAG-Cre/Pdia16*^{fl/fl}, and *Pdia19*^{-/-} adult mice testes. Scale bars, 50 μm. **(B)** Western blotting analysis of PDIA2 and PDIA8 in testes and pancreas from adult mice. GAPDH as an internal loading control.

Supplemental Figure 2. Generation of *Stra8-Cre/Pdia3*^{fl/fl} and *Stra8-Cre/Pdia6*^{fl/fl} mice. (A) H&E-stained testes of control, *Stra8-Cre/Pdia3*^{fl/fl}, and *Stra8-Cre/Pdia6*^{fl/fl} adult mice. *Stra8-Cre* mice were generated as previously described (Cell Research, 2017;27(10):1216-1230). Scale bars, 50 μm. **(B)** H&E-stained epididymis of control, *Stra8-Cre/Pdia3*^{fl/fl}, and *Stra8-Cre/Pdia6*^{fl/fl} adult mice. Scale bars, 50 μm.

Supplemental Figure 3. *Stra8-Cre/Pdi*^{fl/+} mice has normal fertility. (A) Images of testes and epididymis from control and *Stra8-Cre/Pdi*^{fl/+} adult mice. Quantification of testis and epididymis weight to body-weight ratios (mean ± SEM, n=3, NS, not significant, Student's t test). **(B)** Western blotting analysis of PDIs protein in testes from control and *Stra8-Cre/Pdi*^{fl/+} adult mice. GAPDH as an internal loading control. **(C)** H&E-stained testicular sections of control and *Stra8-Cre/Pdi*^{fl/+} adult mice. Scale bars, 50 μm. **(D)** H&E-stained epididymal sections of control and *Stra8-Cre/Pdi*^{fl/+} adult mice. Scale bars, 50 μm. **(E)** Sperm counts from control and *Stra8-Cre/Pdi*^{fl/+} adult mice (mean ± SEM, n=3, NS, not significant, Student's t test). **(F)** Fertility test of control and *Stra8-Cre/Pdi*^{fl/+} adult male mice (mean ± SEM, n=4, NS, not significant, Student's t test).

Supplemental Figure 4. PDI protein is widely expressed in testes. (A)

Western blotting analysis of PDI protein levels in adult mouse tissues, normalized to GAPDH. **(B)** Immunostaining of PDI in testes of mice at 2, 3, and 7 weeks. Scale bar, 20 μ m. **(C)** qPCR analysis of *Pdi* mRNA levels at the indicated time points after birth in testes, normalized to GAPDH (mean \pm SEM, n=4, Student's t test).

Supplemental Figure 5. The deletion of other PDI family members does not affect the expression of HSPA4L, SHCBP1L, and DDX4. (A-H) Western blotting analysis of the expression of HSPA4L, SHCBP1L, and DDX4 in testes of mice lacking *Pdia3*, *Pdia4*, *Pdia5*, *Pdia6*, *Pdia9*, *Pdia14*, *Pdia15* and *Pdia16*. **A.** *Pdia3^{fl/fl}* and *Stra8-Cre/Pdia3^{fl/fl}*. **B.** control and *Pdia4^{-/-}*. **C.** control and *Pdia5^{-/-}*. **D.** *Pdia6^{fl/fl}* and *Stra8-Cre/Pdia6^{fl/fl}*. **E.** control and *Pdia9^{-/-}*. **F.** control and *Pdia14^{-/-}*. **G.** control and *Pdia15^{-/-}*. **H.** *Pdia16^{fl/fl}* and *CAG-Cre/Pdia16^{fl/fl}*. GAPDH as an internal loading control.

Supplemental Table 1. Primer sequences used for genotyping

Genes	Forward	Reverse
PDI flox 1/2	TCAGCTTCTTGTGGCACTAAGCTG	CTCCTCAATCTGTTTCGCATTCCC
Stra8-cre 1/2	ACTCCAAGCACTGGGCAGAA	GCCACCATAGCAGCATCAAA
Stra8-cre 1/3	ACTCCAAGCACTGGGCAGAA	CGTTTACGTGCGCCGTCCAG
UBC-cre 1/2	GCGGTCTGGCAGTAAAACTATC	ACCATTGCCCTGTTTCACT

Supplemental Table 2. Primer sequences used for quantitative PCR

Genes	Forward	Reverse
