

Supplemental Data 3

Uncropped Western Blots

Ladder Used: PageRuler 26616 unless otherwise specified

Western blots were imaged using Licor Odyssey Fc system at 600 and Chemi channels. The exposures are overlaid in order to show ladder and the outline of the membrane. Due to lane constraints, samples from one experiment may have been run using identical loading volumes across multiple gels and membranes. Some blots are stripped and restained i.e., for total protein after phospho-blot or for GAPDH.
