

a PBS-liposomes

clodronate liposomes

Suppl. Fig. 1: Macroscopic phenotype of clodronate liposome treated K14-Cre-IKK2^{fl/fl} mice and mast cell numbers in newborn K14-Cre-IKK2^{fl/fl} and control mice

a: Image of a clodronate liposome treated (right) and one PBS liposome treated (left) K14-Cre-IKK2^{fl/fl} mouse. Red oval indicates treated back skin area.

b: Numbers of mast cells per power field were counted in Giemsa stained sections from the skin of 6 K14-Cre-IKK2^{fl/fl} mice (black bars) and 6 control mice (grey bars) obtained at P1- P5.
