

Figure S1

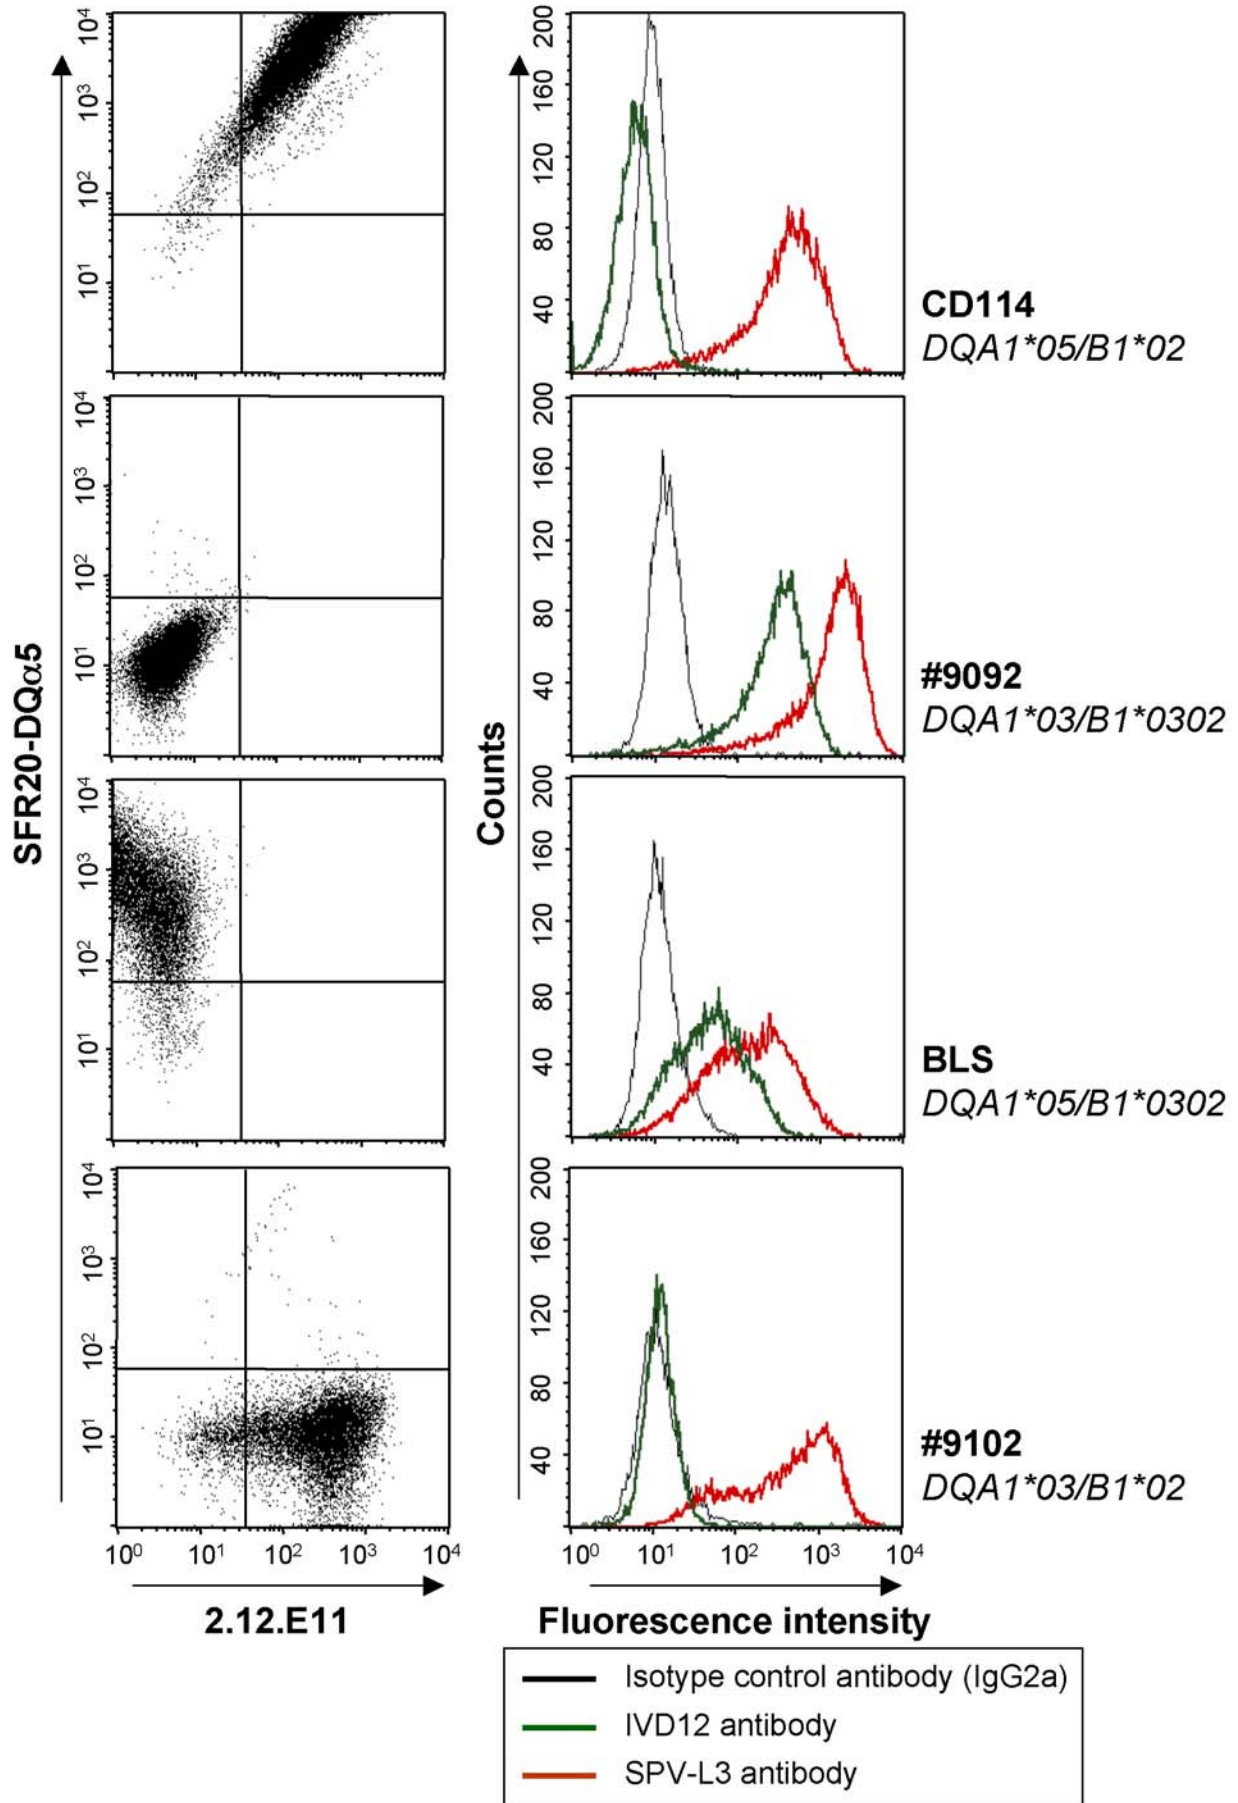

Figure legend supplemental data

Figure S1 Flowcytometric analysis of HLA-DQ expression by B-lymphoblastoid cells. The expression of HLA-DQ molecules was tested at the time of the T-cell assay described in Figure 7 to analyze for purity of cell populations and the level of surface DQ expression. The following mAbs were used: 2.12.E11 (specific for DQ β 1*02), SFR20-DQ α 5 (specific for DQ α 1*04/05/06), IVD12 (specific for DQ β 1*03) and SPV-L3 (specific for pan DQ). Staining for isotype control mAb is shown for IgG2a. The isotype control IgG1 gave even weaker signal (not shown).
