Supplementary Figure 2.

Lyssenko *et al.*

Supplementary Figure 1. (A) Correlation between the area under the insulin curve during oral (OGTT) and intravenous (IVGTT) glucose tolerance test according to *PPARG* P12A polymorphism (Botnia cohort, N=403). (B) Correlation between 2hr GIP (pg/ml) and glucagon (pg/ml) concentrations (Botnia PPP cohort, N=78). Blue lines represent non-risk PA/AA and red lines risk PP genotype carriers of *PPARG* P12A polymorphism.

Supplementary Figure 2. Acute insulin response to arginine at 28 mmol/l of glucose in carriers of *TCF7L2* haplotypes of SNPs rs7903146 and rs1088540: HapA (CCAA and/or CCAG), Hap AB (CTAG) and the two HapB possibilities (CTGG and TTGG) in subjects with IGT/T2D. Bars represent mean \pm SE.

Supplementary information.

Supplementary Table 1A. Risk of developing T2D according to *TCF7L2* rs7903146 and rs12255372 in the prospective studies.
