**Supplemental Figure S1**

Representative Images of 20 Week Old JAK2L Mouse Livers.

**A – H+E.** There is diffuse hepatocellular lipidosis affecting the entire lobule, i.e. from centrilobular (roughly corresponding to zone 3) to portal (roughly corresponding to zone 1). In contrast to typical lipid distribution in NASH (predominantly macrovesicular and zone 3), microvesicular and macrovesicular change coexist, with macrovesicular change most evident midlobular (roughly corresponding to zone 2). Small foci of inflammation occur at random within lobules (yellow square). P=portal vein. C=central vein. Miv=microvesicular change with vesicle Ø < hepatocellular nuclei. Mav=macrovesicular change. **B – Trichrome.** Same lobule as shown in A. Within the focus of inflammation there is deposition of sparse collagenous matrix (royal blue). Arrow: free lipid droplets are occasionally enclosed within the foci. **C – H+E.** Small intralobular focus of inflammation. **D – Trichrome.** Same focus as in C. Spindle cells and

sparse collagenous matrix extend from the focus to enclose and isolate an adjacent hepatocyte (arrows). This type of “perisinuoidal” fibrosis is typical for NASH.

## Supplemental Figure S2

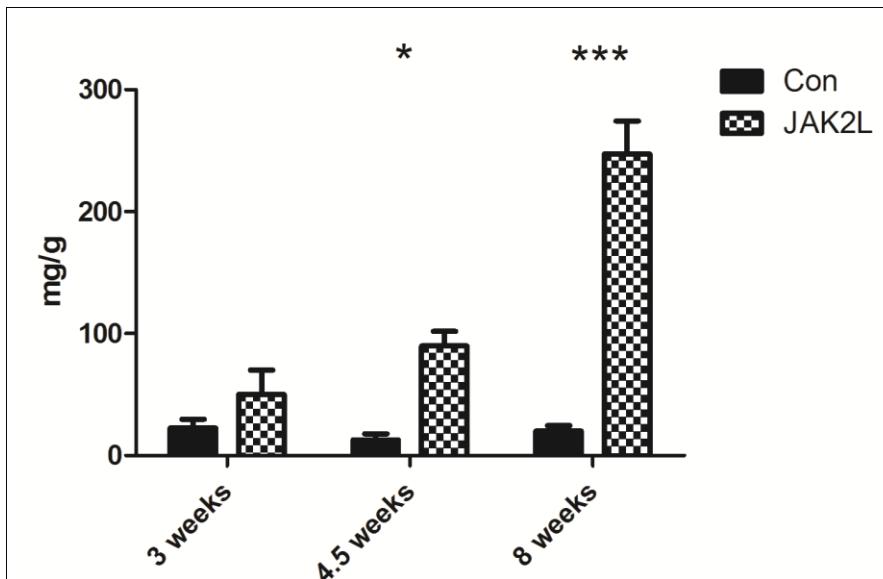

Glucose and Insulin Tolerance Tests.

There were no differences in glucose (**a**) or insulin (**b**) tolerance in 8-week-old JAK2L mice versus Con.

### Supplemental Figure S3

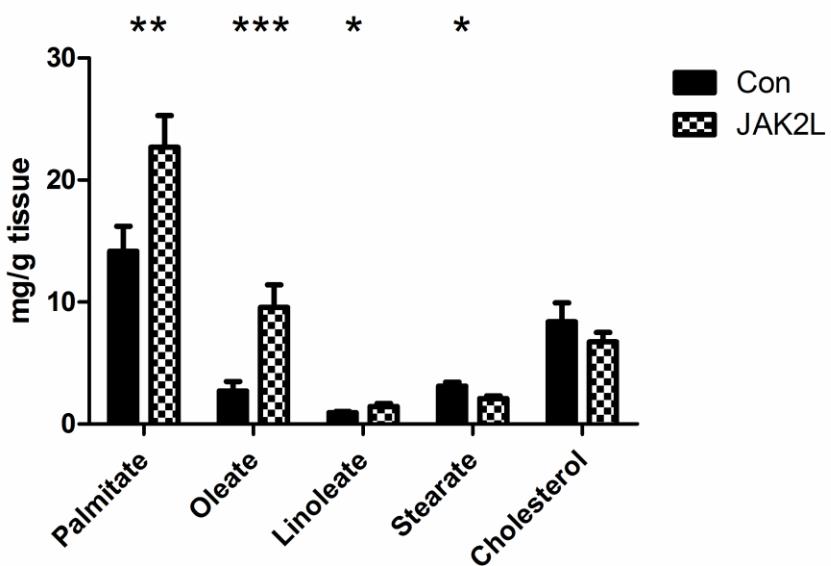

Liver Triglyceride Content in Younger JAK2L Mice.

Liver TG of JAK2L and Con mice content was measured using the colorometric assay at 3, 4.5 and 8 weeks of age ( $n = 5$  for each group). Values are expressed as mean  $\pm$  SEM. \* $P<0.05$ , \*\*\* $P<0.001$ .

### Supplemental Figure S4

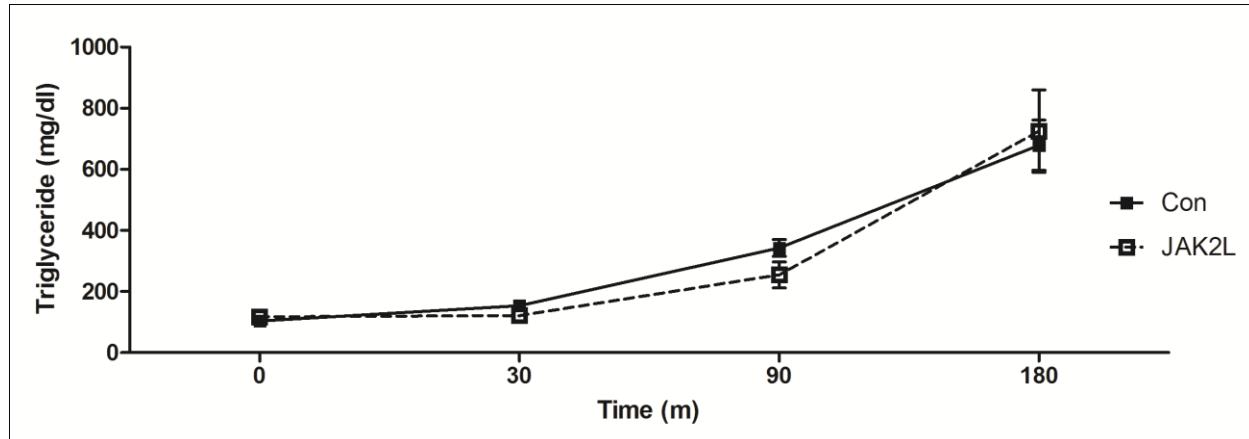

Liver Fatty Acid Content.

The content of each indicated lipid was measured in 4-week-old male Con ( $n=9$ ) and JAK2L ( $n=6$ ) mice. Values are expressed as mean  $\pm$  SEM. \* $P<0.05$ , \*\* $P<0.01$ , \*\*\* $P<0.001$ .

## Supplemental Figure S5

Triglyceride Secretion.

There were no differences in TG secretion rates after injection with Triton WR-1339.

## Supplemental Figure S6

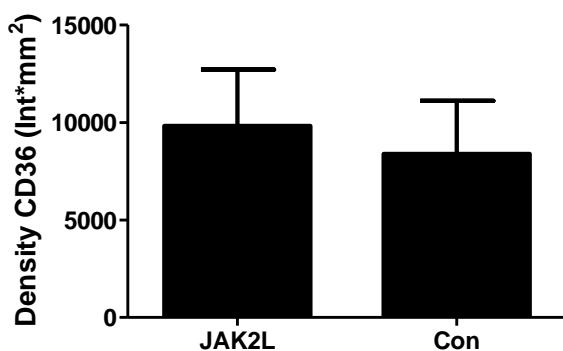

### CD36 Protein Content in Heart

(a) Western blots of heart tissue from JAK2L and Con mice. In the upper panel, individual mouse samples were incubated with a commercially available polyclonal antibody against CD36. In the bottom panels, the blots were stripped and incubated with an antibody against actin. There is no difference in the content of CD36 in the JAK2L samples versus Con. (b) Quantified density ( $\text{Intensity}^*\text{mm}^2$ ) of the CD36 band from the blot in (a).
